## **DETAILED ACTION**

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morikawa (US 4 545 347) in view of Davis (US 5 105 784). Morikawa discloses an internal combustion engine, comprising a working space controlled by main valves (12), a charge channel leading to at least one of the main valves, a region of the charge channel divided into at least two parallel charge channel paths (8, 4), and at least one additional valve (10, 11, 15) controlling that portion of the charge volume flow in each of the two parallel charge channel paths. However, Morikawa does not show the use of a rotary slide valve. Davis shows that the use of a rotary slide valve is old and well known in the art. Since the prior art references art from the same field of endeavor, the purpose disclosed by Davis would have been recognized in the pertinent art of Morikawa. Therefore, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide the device of Morikawa with the rotary slide valve as taught by Davis. Regarding the provision of more than one sliding valve, it is a duplication of a known parts for its known functions.

Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Morikawa (US 4 545 347) in view of Hitomi (US 4 738 233). Morikawa discloses an internal combustion engine, comprising a working space controlled by main valves (12), a charge channel leading to

at least one of the main valves, a region of the charge channel divided into at least two parallel charge channel paths (8, 4), and at least one additional valve (10, 11, 15) controlling that portion of the charge volume flow in each of the two parallel charge channel paths. Hitomi shows that the use of a rotary slide valve is old and well known in the art. Since the prior art references art from the same field of endeavor, the purpose disclosed by Hitomi would have been recognized in the pertinent art of Morikawa Therefore, it would have been obvious at the time the invention was made to a person having ordinary skill in the art to provide the device of Morikawa with the rotary slide valve as taught by Hitomi. Regarding the provision of more than one sliding valve, it is a duplication of a known part for its known function.

## Response to Arguments

Applicant's arguments filed November 14, 2005 have been fully considered but they are not persuasive. The attorney argues that there is no teaching to replace from a flap valve to a slide valve. The examiner disagrees because there is no requirement that a motivation to make the modification be expressly articulated. The test for combining references is what the combination of disclosures taken, as a whole would suggest to one of ordinary skill in the art. In re Simmon, 174 USPQ 114; In re Mclaughlin, 170USPQ 209. References are evaluated by what they suggest to one versed in the art, rather than by their specific disclosures. In re Bozek, 163 USPQ 545. Accordingly, the purpose of using a flap/slide valve is for controlling the volume of the flow since the specification does not provide the unexpected result therefrom.

## Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to John T. Kwon whose telephone number is (571) 272-4846. The examiner can normally be reached on M-Th.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Yuen can be reached on (571) 272-4856. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
